Dear West Michigan Works!

It is my pleasure to share with you the success story of Tyler LaCombe, who was able to attend a training called Learning to Program with VN.NET.

Tyler started with Altron Automation in 2017 as a Systems Engineer. In this role, it is essential for him to have an understanding of software, data management, and reporting functions. He is the gatekeeper of our time and job costing software, and often needs to make modifications to it in order to make it function as best as possible for the company.

By having this training, Tyler was able to gain a more detailed understanding of the foundation of programming. This allows him to really be aware of how a system works from the ground up, and that makes it much easier for him to understand the way he needs to program something to get the result for which he is looking.

Here at Altron Automation, we are all very grateful for the training grant and the opportunities it affords our employees like Tyler.

Thank you,
